Subject: Recycling Made Simple — Introducing Our Geomembrane Take Back Program!

At Plastatech[®], sustainability is at the core of what we do. We are excited to introduce our Geomembrane Take Back Program, a new initiative designed to help reduce waste and promote a circular economy by responsibly recycling used or scrap PVC membranes.

Rather than sending excess material to landfills, we are offering a solution which ensures it is repurposed and given a second life. By participating in this program, you not only minimize environmental impact but also contribute to a more sustainable future for all.

Let us handle the hard part — we'll work with you to arrange the return your scrap PVC membranes to our Saginaw, Michigan, facility. Plastatech will cover the cost of transport and the recycling process! Together, we can make a meaningful difference in reducing waste and conserving resources.

To learn more about our Geomembrane Take Back Program and how to participate, please contact us at 800.892.9358. Thank you for partnering with us in our commitment to sustainability!

Sincerely,

Mark Rose
Plastatech Sales Manager
